Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

•		Application No.	Applicant(s)					
Office Action Summary		10/760,389	OE ET AL.					
		Examiner	Art Unit					
		Mathieu D. Vargot	1791					
	The MAILING DATE of this communication appears on the cover sheet with the correspondence address							
	Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).								
Status								
1)⊠	Responsive to communication(s) filed on <u>09 Oc</u>	ctober 2007.						
2a) <u></u> □	This action is FINAL . 2b)⊠ This action is non-final.							
3)	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is							
	closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.							
Dispositi	ion of Claims							
4) 🖂	Claim(s) 1-9,11 and 12 is/are pending in the ap	plication.						
4a) Of the above claim(s) is/are withdrawn from consideration.								
5) Claim(s) is/are allowed.								
6)⊠	Claim(s) 1-9,11 and 12 is/are rejected.							
•	Claim(s) is/are objected to.		·					
8)	8) Claim(s) are subject to restriction and/or election requirement.

Art Unit: 1791

1.The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-9, 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshimura et al –632 (see col. 14, lines 6-21) in view of Japanese Patent 2002-356,615.

Yoshimura et al -632 (see col. 14, lines 6-21) discloses the basic claimed process of manufacturing an optical waveguide for optically connecting optical devices by disposing a photosensitive resin material between optical devices, the photosensitive resin containing a photosensitizer which would undergo a structural change to allow the resin to cure and form a connective optical path and removing the material (including photosensitizer) that does not polymerize—ie, is not irradiated—such that resultant cavities are formed after the optical path is formed. Essentially, the primary reference fails to disclose that the instant sensitizer is used. However, note that polyimide epoxy resins would be used (see col. 14, line 16). Japanese -615 teaches a polyimide resin with the instant 1,4-dihydropyridine derivative photosensitizer present in the instant concentrations and that such would be useful in forming an optical waveguide material. It would have been prime facie obvious to one of ordinary skill in the art to use the resin composition taught in Japanese -615 as the resin in the primary reference to form an optical waveguide with the required transparency and superior heat resistance. See the abstract of Japanese -615. The formulae given for the sensitizer in Japanese -615

Application/Control Number: 10/760,389

Art Unit: 1791

appears to encompass the structures recited in instant claims 5-9—if these are not explicitly taught in the reference, then they surely would have been obvious thereover. Fluorinated resins are conventionally used in optical applications and such would have been an obvious choice for the resin in Yoshimura et al –632 for the heat resistance offered by these materials.

2.Applicant's arguments with respect to the claims have been considered but are most in view of the new ground(s) of rejection.

Applicant's comments directed to the previous rejection are now moot in view of the new rejection. While the previous references may have been directed to removing parts of films, it is clear that Yoshimura et al –632 is removing resin material that is not irradiated, and not merely a film. Surely applicant would admit that the use of the instant photosensitizer as taught by Japanese –615 would have been obvious in the process of Yoshimura et al –632.

3.Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mathieu D. Vargot whose telephone number is 571 272-1211. The examiner can normally be reached on Mon-Fri from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Johnson, can be reached on 571 272-1176. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for
